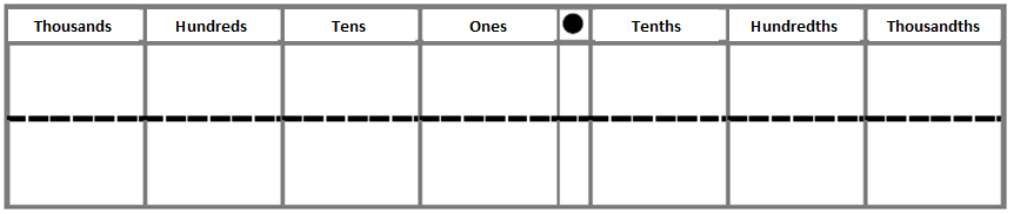
Let's think about numbers…

Each place value is _____ times greater than the place value to its right. That means that the place value to the left of a number will always be _____ than a place to the right.



Today we will be multiplying decimals by multiples of 10:

Let's list the multiples of 10 that we will be multiplying by today:

_____

The number of zeros will _____the number to the _____that many spaces. The decimal _____moves and is not considered a _____.

Remember…

If you multiply by 10, you will move your number to the left _____ space.

If you multiply by 100, you will move your number to the left _____ spaces.

If you multiply by 1,000 you will move your number to the left _____ spaces.

Problem 1:

0.2 x 10

1. Copy the problem in the top row of the chart.

3. Move the number to the left the amount of zeros that are in the multiple of 10 in the bottom row of the chart. Draw arrows to show your movement from top to bottom numbers. This is your answer

4. Re-write your answer on the line below the chart.

Input Activity

Yesterday in math class we multiplied by multiples of 10. What did that mean? Explain. Today we will be dividing by multiples of 10. What do you think that would mean?

Each place value is _____ times greater than the place value to its **RIGHT**. That means that the place value to the **RIGHT** of a number will always be _____ than a place to the **LEFT**.

Let's build the place value chart that we used yesterday:

Thousands	Hundreds	Tens	Ones	●	Tenths	Hundredths	Thousandths

Today we will be dividing decimals by multiples of 10:

Let's list the multiples of 10 that we will be dividing by today: _____

The number of zeros will _____the number to the _____that many spaces. The decimal _____move and is not considered a _____.

Remember…

If you divide by 10, you will move your number to the right_____ space.

If you divide by 100, you will move your number to the right _____ spaces.

If you divide by 1,000 you will move your number to the right _____ spaces.

Invisible Decimals:

Every number has an _____ _____. The invisible decimal will always be after the number.

Ex: 45

The number is written _____

Problem 1:

2. Copy the problem in the top row of the chart.

3. Move the number to the left the amount of zeros that are in the multiple of 10 in the bottom row of the chart. Draw arrows to show your movement from top to bottom numbers. This is your answer

4. Re-write your answer on the line.

Expanded form - shows how much each digit is worth and that the number is a total of those values added together.

Ex: 60 + 5 + 0.4 ***or*** 60 + 5 + $\frac{4}{10}$

Unit form - helps us see how many of each size unit are in the number

Ex: 6 tens 5 ones 4 tenths
