Learning Target: I can investigate and use the formulas for area and perimeter of rectangles.

## Module 3 Lesson 1

Do Now

## Input

Problem 1: Review and compare perimeter and area of a rectangle.
Draw a rectangle that is 4 units wide and 7 units long.

Opposite sides are the same $\qquad$ .

Rectangles have 4 $\qquad$ angles.

## PERIMETER:

Starting with your pencil on one corner, trace around the outside of the rectangle until you get back to where you started. The measurement of the distance around a rectangle is called the
$\qquad$ .

Trace the perimeter again, and count the units as you trace them. The perimeter of this rectangle is $\qquad$ units.

Formula for perimeter: $\qquad$

AREA:
Now, shade in the inside of your rectangle. The space inside a rectangle is called the $\qquad$ .

Count the square units inside the rectangle to find the area. The area of this rectangle is $\qquad$ square units.

Formula for area:

Exit Ticket:

1. Determine the area and perimeter of the rectangle.

2. Determine the perimeter of the rectangle.

## Monday

Learning Target: I can solve multiplicative comparison word problems by applying the area and perimeter formulas.

## Module 3 Lesson 2

## Do Now

Input
Problem 1: A rectangle is 1 unit wide. It is 3 times as long as it is wide. Find the length.

Shade 3 square units.

The width of this rectangle is $\qquad$ units.

The length is $\qquad$ units.

## 7

Now, make it 2 times as long by shading 3 more squares.
The new length is $\qquad$ units.

Make the rectangle 3 times as long by shading 3 more squares.
The new length is $\qquad$ units.

Using the original length, how would you find the length of a rectangle that is $\mathbf{4}$ times as long? (Write an equation)

Exit Ticket:

A narrow rectangular banner is 5 inches wide. It is 6 times as long as it is wide.
a. Draw a diagram of the banner, and label its dimensions.
b. Find the perimeter and area of the banner.
